

Descoderm V

Antibacterial hand sanitizer

- 80% alcohol (V/V)
- Contact time: 15 seconds*
- Perfume free
- Effective disinfection of the skin prior to injections.
- Dermatologist tested

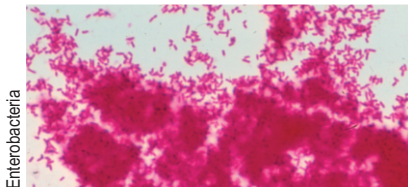

When the basics just are not enough.

More and more emerging information and opinions are emphasizing the importance of effective hand hygiene in infection control. Gloves, gowns and masks are essential, but at the heart of the matter is preventing potentially dangerous bacteria from being introduced to patients and their environments. When patients have been colonized or infected the goal shifts toward protecting other vulnerable and compromised patients from being harmed by the unwanted organism. Nowhere is this truer than in the emergency units and surgical suites of a hospital.

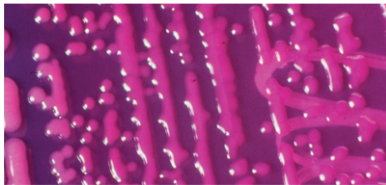

Through numerous studies products containing 80% (V/V) alcohol have been shown to be an effective antibacterial preparation. Effective hand hygiene including products with these proven properties have been shown to prevent the spread of contagious pathogens like MRSA and VRE, major challenges to hospitals today.

Safety goes beyond microbiology.

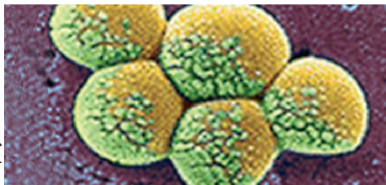

Healthcare professionals also need to protect their skin from the unwanted effects of the very products charged with protecting them. Pure products that are built to be gentle to the skin are ideal for the long term aggressive use associated with the healthcare environment. **Descoderm V** has been tested by dermatologists and shown to be gentle on sensitive skin, even with repeated daily use.

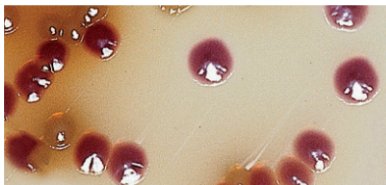

Enterobacteria

Klebsiella

Staphylococcus Aureus

Escherichia Coli

AMG No.	Description	Format
